PlazaStoreIT Online Backup

PlazaStoreIT Online Backup, powered by Attix5 is ideal for small businesses that are looking for a more efficient, reliable and secure way to backup and recover its critical data. All the data is stored on fault tolerant servers mirrored in two of our data centres located within IBM business continuity buildings.

PlazaStoreIT Online Backup offers the following features:

- **Automatic** – Define a data backup policy, set a schedule and it runs in the background.
- **Secure** – utilises 128 bit and 448 bit encryption.
- **Efficient** – After the first backup, which can be performed over the Internet or by a portable file server, only the daily changes are backed up at a binary level.
- **Speed of recovery** – As the data is stored on disk, rather than tape, data can be restored immediately.
- **Centralised control** – Backup and restore management and monitoring for all central and distributed servers.
- **Self-service recovery** – Laptop users can recover their own lost files without calling the central helpdesk
- **Easy to use** – Simple to use Graphical User Interface (GUI)
- **Long term archiving option** – Month-end archives can be run onto tape for long term storage

All the above services are delivered from Plaza Dynamics secure data centres, within IBM Business Continuity buildings, and utilise Plaza Dynamics high speed, ultra reliable network infrastructure which has direct connections to three Tier 1 Internet backbone providers - Cable & Wireless, Energis and Level3 communications.
